Introduction:
This scope of work outlines the tasks and deliverables required for the development of a standard website. The website will be developed using a pre-designed theme, with specific features such as a search button, contact form, and WhatsApp integration. The estimated duration for completion, including user acceptance testing, is four to eight weeks.

Theme Selection and Purchase:
The client will be responsible for selecting and purchasing a pre-designed theme from a reputable theme marketplace. The theme should meet the desired aesthetics and functionality requirements of the website. The client may seek guidance from the development team during the selection process if needed.

Requirements Gathering:
The development team will collaborate with the client to gather the necessary information about the website's structure, content, and desired features. This will include discussions regarding the site's sitemap, images, content, and font types. The client must provide all required materials and specifications before the commencement of website development.

Website Development:
Based on the chosen theme and provided requirements, the development team will begin building the website. This includes the following tasks:
1. Installation and setup of the selected theme.
2. Customization of the theme to match the client's branding and aesthetic preferences.
3. Integration of a search button, if supported by the selected theme.
4. Integration of a contact form to enable users to send inquiries.
5. Integration of a WhatsApp button for quick communication with the client.
6. Optimization of the website for responsive design and cross-browser compatibility.
7. Implementation of necessary plugins or extensions for enhanced functionality.

Content Integration:
The client will be responsible for providing all website content, including text, images, and any other media. The development team will integrate the provided content into the website's pages and sections, ensuring proper formatting and alignment.

User Acceptance Testing:
Upon completion of the website development, the client will be granted access to a test environment to review and test the functionality of the website. The client will be encouraged to provide feedback and report any issues or required adjustments during this phase. The development team will address the feedback and make the necessary revisions.

Launch and Deployment:
Once the client has approved the final version of the website, the development team will proceed with the deployment process. This involves transferring the website to the client's chosen hosting environment, configuring domain settings (if applicable), and ensuring a smooth transition to the live environment.

Note: Any additional features or functionality not mentioned in this scope of work may require adjustments to the timeline and will be subject to further discussion and agreement between the client and the development team. Additional costs may incur.
